

TransBASE: Documentation

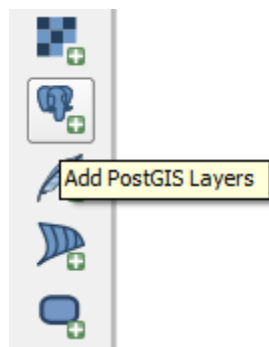

Date Documentation Last Updated: 9/22/2015

Connecting to TransBASE with QGIS Desktop 2.10.1 (Pisa) or earlier versions

1) Open QGIS Desktop

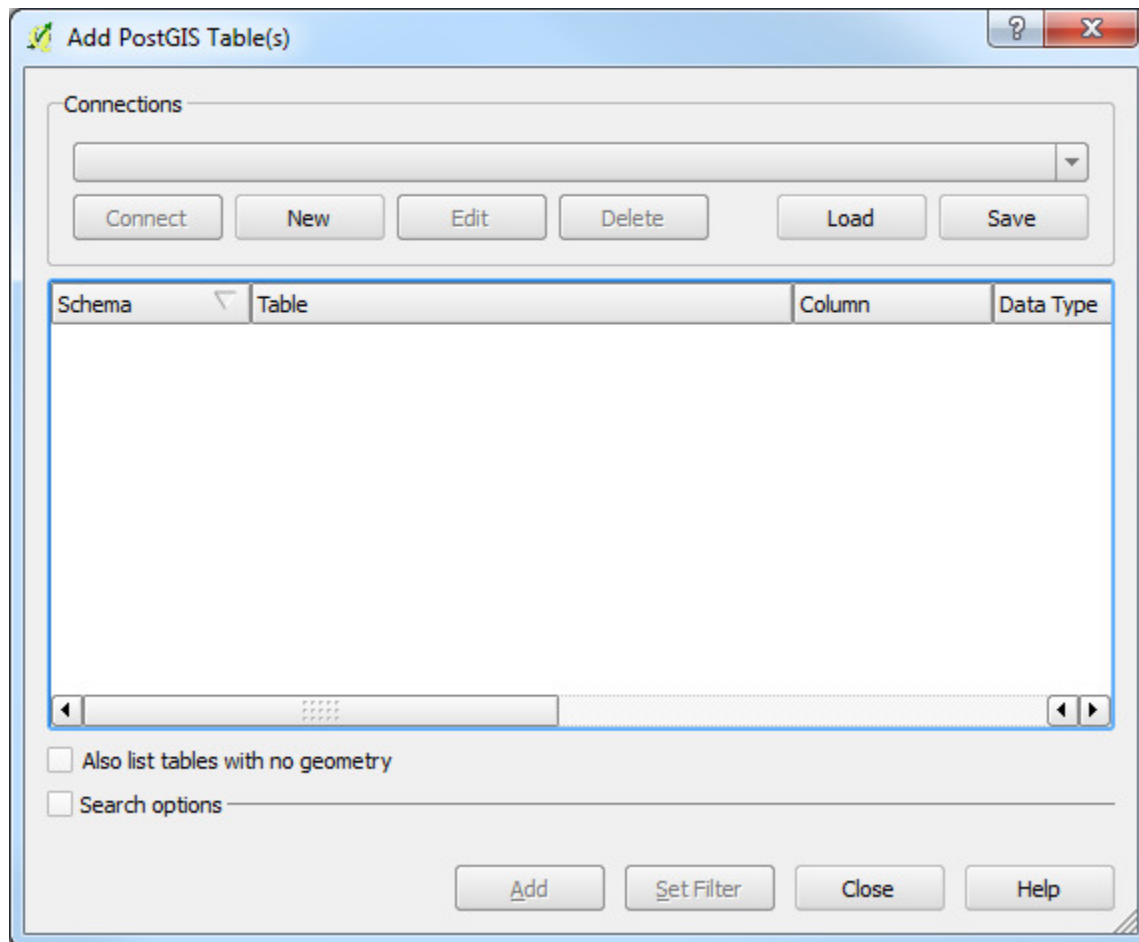

2) Click on the Add PostGIS Layer button.

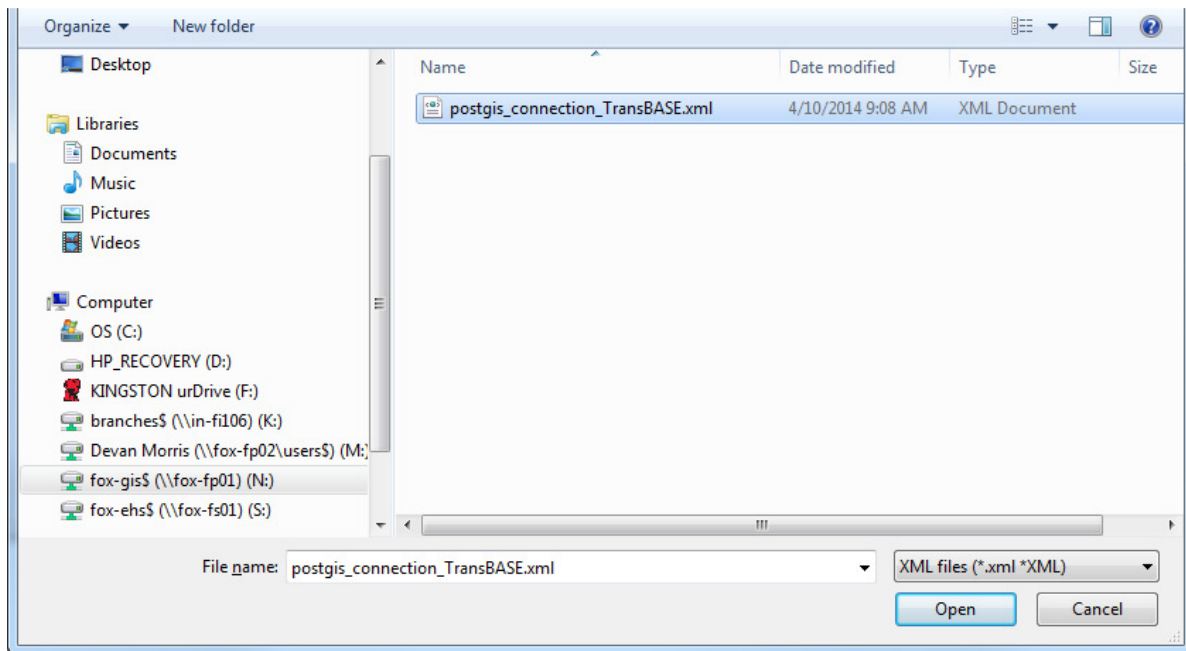

TransBASE: Documentation

3) In the Add PostGIS Table(s) window click the Load button.

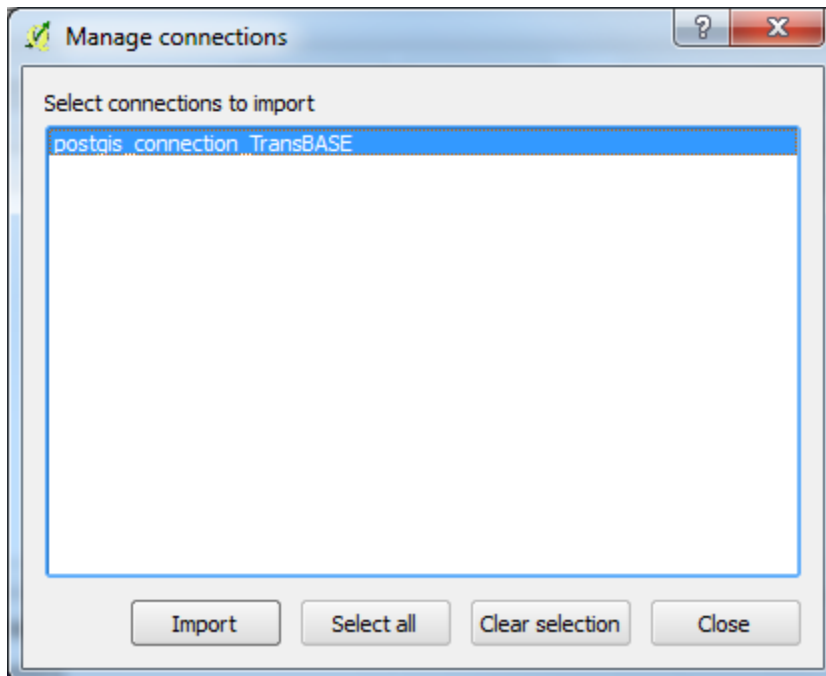

TransBASE: Documentation

4) Navigate to the folder you downloaded from TransBASE.org and select `postgis_connection_TransBASE.xml` then click Open.

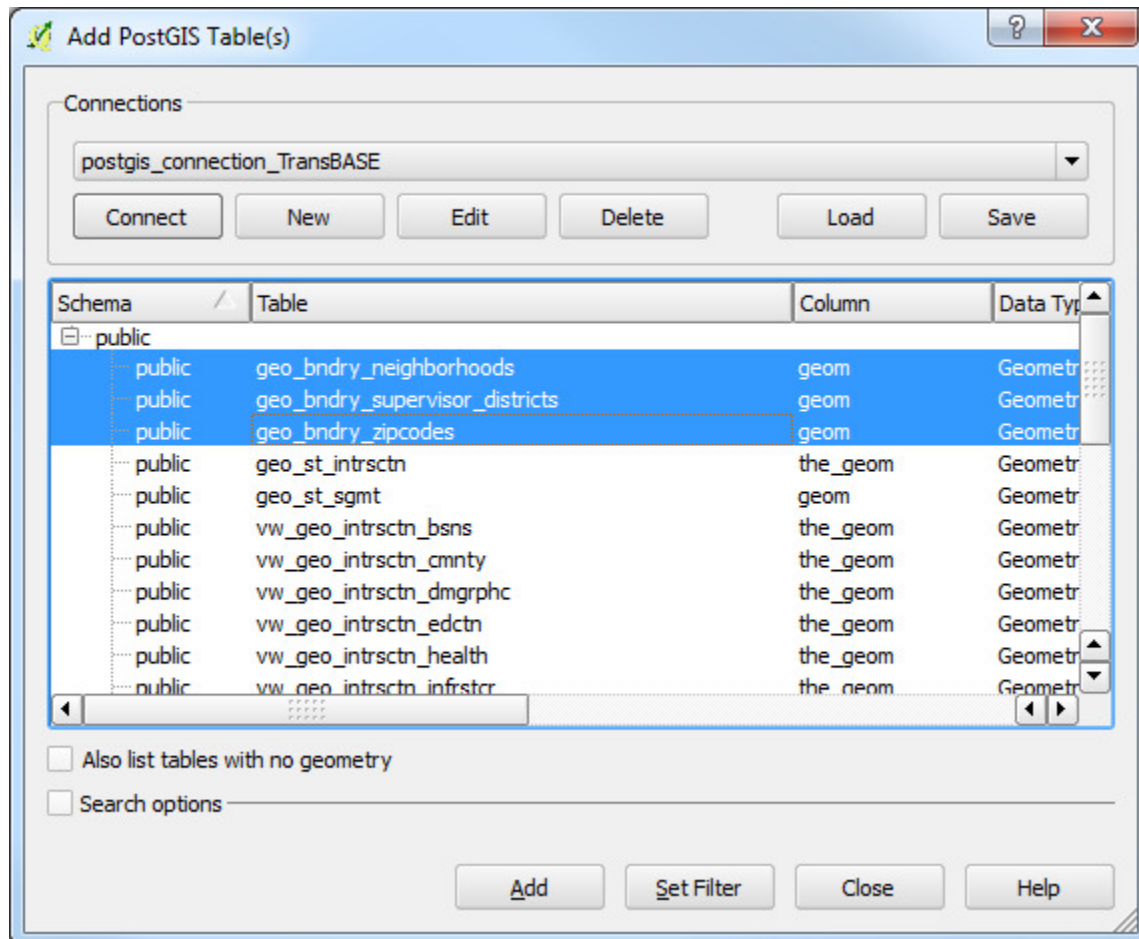

5) In the Manage connections window click `postgis_connection_TransBASE` then click Import.

TransBASE: Documentation

6) Finally, in the Add PostGIS Table(s) window make sure postgis_connection_TransBASE is selected in the dropdown menu then click Connect. Click the plus sign next to public under the Schema column then select the layers you are interested in viewing.

TransBASE: Documentation

7) QGIS should recognize the Primary Key for each data layer; however, it is possible it may not. If you are unable to add a layer check that the Primary Key is set to a unique field (gid, {table name}_pkey, or unique_id (for views)).
